

Managing Negative COVID-19 Results

Impacted Locations	All
Intended Audience	Inpatient Physician and APP

When a patient's COVID-19 test result is reported as negative:

- The Suspected flag is automatically removed **and**
- Storyboard will display a review notification **and**
- The COVID-19 BPA will display in the patient chart.

Choose next steps based on a Negative Result:

From the BPA, select one of the following:

1. Treat Patient as COVID-19 Negative: select the associated Acknowledge Reason, and update isolation orders as clinically appropriate.
2. Treat Patient as Presumed Positive: select Order to apply the COVID-19 (Presumed Positive) Infection Flag.
3. If a decision cannot be made, choose a defer options.

BestPractice Advisory - Delirium, Screening

Patient has Negative COVID-19 Test Result

This patient's COVID-19 test was resulted as negative.

The suspected COVID-19 infection flag has been removed.

Please take one of the following actions prior to making any changes to isolation status:

- **Negative:** Click 'Treat Patient as COVID-19 Negative' to confirm COVID-19 is unlikely, then contact nursing to change isolation status as clinically appropriate.
- **Presumed Positive:** Click 'Order' to confirm it is still likely this patient has COVID-19 despite a negative result.

To defer this alert, choose one:

- Not Primary Provider for this Patient
- Defer Decision Pending Further Clinical Review

2 Order **Do Not Order** Apply COVID-19 (Presumed Positive) Infection Flag

1 Acknowledge Reason **3**

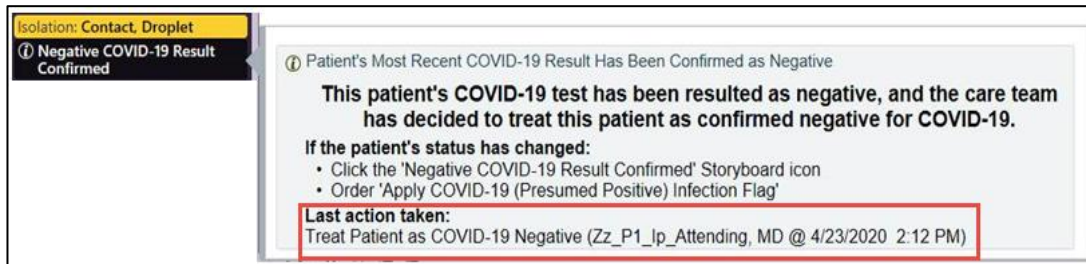

1 Treat Patient as COVID-19 Negative Not Primary Provider for this Patient Defer Decision Pending Further Clinical ...

When a COVID-19 Negative status is confirmed:

- The Storyboard flag will update.

- Hover over the **Negative COVID-19 Result Confirmed** flag to view the user who treated as COVID-19 Negative, or
- Select the Negative Confirmed flag to Order the COVID-19 (Presumed Positive) Infection Flag.

COVID-19 BPA in the Emergency Department

The COVID-19 BPA will only display when entering a bed request order (BRO).

Choose next steps based on negative result

When receiving the BPA, prior to making any changes to isolation status or initiating a bed request, select one of the following:

1. Treat Patient as COVID-19 Negative: select the associated Acknowledge Reason and update isolation orders as clinically appropriate.
2. Treat Patient as Presumed Positive: select Order to apply the COVID-19 (Presumed Positive) Infection Flag.
3. Remove the Bed Request Order: click Remove to stop placing the Bed Request order.

BestPractice Advisory - Test, Pebbles

COVID-19 (2)

🔔 Patient has Negative COVID-19 Test Result

This patient's COVID-19 test was resulted as negative.

The suspected infection flag has been removed.

Please take one of the following actions prior to making any changes to isolation status or initiating a bed request:

- **Negative:** Click 'Treat Patient as COVID-19 Negative' to confirm COVID-19 is unlikely, then contact nursing to change isolation status as clinically appropriate.
- **Presumed Positive:** Click 'Order' to confirm it is still likely this patient has COVID-19 despite a negative result.

Remove the following orders? _____

3 Remove Keep ➡ Bed Request

Apply the following? _____

2 Order Do Not Order ➡ Apply COVID-19 (Presumed Positive) Infection Flag

⚠ Acknowledge Reason _____

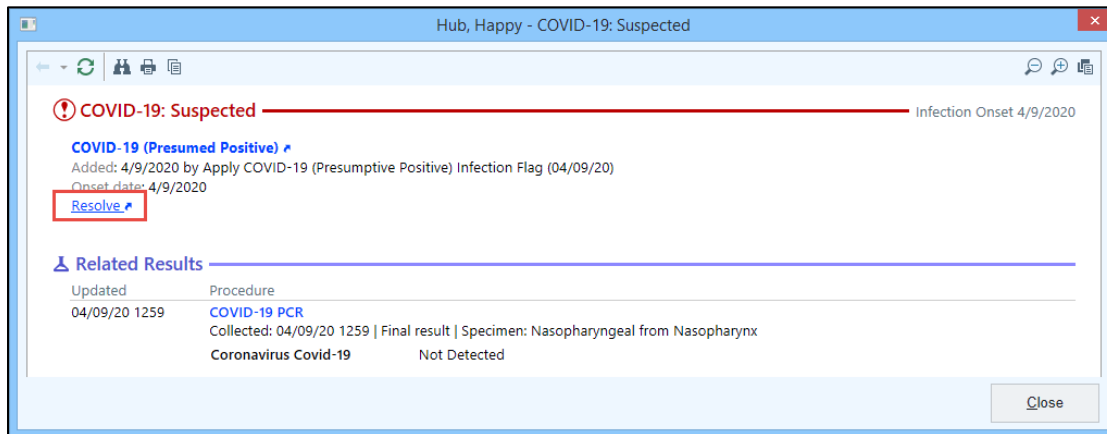

1 Treat Patient as COVID-19 Negative

Resolving the COVID-19 Presumed Positive Infection Flag

1. Select the **COVID-19 Suspected** flag from Storyboard to view the Infection Status report.

2. From the report, select **Resolve** to remove the **COVID-19 (Presumed Positive)** Flag.

3. Enter a comment to document reason for resolution, and click **Resolve**.

Reference

- **Rule out COVID-19 infection with a suspected status:** Applied automatically when COVID-19 lab test is ordered for all patients, except outpatients being screened prior to outpatient procedures, and automatically removed upon result of a COVID-19 lab test, both for positive and negative results.
- **COVID-19 with a positive status:** Applied automatically with positive COVID test result or if the diagnosis date is documented on the travel screen. After 20 days the flag is automatically removed.
- **COVID-19 (Presumed Positive) with a suspected status:** Ordered through the BPA process above. Follows the same process for removal as COVID-19, unless resolved by a Physician/APP.
- To change the COVID-19 positive infection flag contact Infection Prevention or place a clinical clearance order to resolve the infection.

Flag	Screen Shot	When Does It Appear?
Positive		<p>Patient has an active COVID-19 infection documented in their chart.</p> <p>Change Note: This flag appears in place of the COVID-19 infection status. Hovering over the banner will display info on when and how this status was applied.</p>

Suspected	COVID-19: Suspected 9/30/2020	<p>Patient has an in-process lab test for COVID-19, excluding tests for scheduled procedures and discharges to external facilities. -or- The care team has decided to treat the patient as presumed positive for COVID-19 despite a negative test result.</p> <p>Change Note: This flag appears in place of the Rule-out COVID-19 and COVID-19 (Presumed Positive) infection statuses. Hovering over the banner will display which status is active.</p>
Resolved	COVID-19: Resolved 9/30/2020	<p>Patient had a positive COVID-19 infection within the last 90 days that has since been resolved.</p> <p>Change Note: This is a new flag. Previously, nothing would appear on the Storyboard in this scenario.</p>
Lab History	COVID-19: Lab History	<p>Patient has a history of COVID-19 testing.</p> <p>Change Note: This is an updated flag. Previously, called History.</p>
Unknown	COVID-19: Unknown	<p>This flag appears when there is no COVID-19 lab testing history in the patient's electronic medical record.</p> <p>Change Note: This is a new flag. Previously, nothing would appear on the Storyboard in this scenario.</p>
