

Clinical and Collaboratives News

This monthly communication highlights recent and upcoming Epic improvements to ambulatory and inpatient workflows and other clinical news. Please share with physicians, advanced practice providers and your team.

Announcements

NM CONNECT APP NOW AVAILABLE

The next generation of the Northwestern Medicine Workforce app, **Northwestern Medicine Connect**, is now available on the [Apple App Store](#) and the [Google Play Store](#). Employee features include NM Symptom Check, your COVID-19 vaccination records, your benefits summary, hospital café menus and more. View a [tip sheet](#) and [frequently asked questions](#).

EPIC EARTH

Did you know Epic Earth offers tips and insights from clinicians at hundreds of leading healthcare organizations? You can access Epic Earth from Hyperspace by selecting the earth icon on the right side of the main Epic toolbar, shown here. Search for a topic, follow and participate in discussions, and view content, such as It's Possible videos. View a [tip sheet](#).

HSCC INFORMATION

View a list of active Health System Clinical Collaboratives, as well as completed projects, key decisions and other information on the [Health System Clinical Collaboratives page on NM Interactive](#).

The following updates will be made on Tuesday, April 26, unless otherwise noted.

System updates

HARD STOP ORDER QUESTION FOR FLUOROSCOPY LUMBAR PUNCTURE

The order question, "Is opening pressure needed?" will be a hard stop when you place an order for a Fluoroscopy Lumbar Puncture - IMG3048.

Fluoroscopy Lumbar Puncture Accept Cancel

Priority: Routine Routine STAT

Frequency: **1 TIME IMAGING**

At: 4/19/2022 Today Tomorrow
0932

Does this exam require fluid to be collected?
Yes No

Will the patient require anesthesia?
None Anesthesia Sedation

! Is opening pressure needed?
Yes No

! Reason for Exam: Comments

Ambulatory updates

IMMUNIZATION AGE RANGE VALIDATION

Clinicians will receive an order validation message when a patient is outside the age range for a vaccine. Depending on the vaccine, the order validation will be a hard stop, as shown below, or a soft stop. View a [tip sheet](#) for more information about immunization age requirements.

In addition, the Hepatitis A Immunization Health Maintenance topic has been updated to allow for a four-day grace period. This topic will be satisfied if an immunization is documented up to four days before the next dose.

Order Validation ×

!! You cannot sign these orders because information is missing or requires your attention:

Patient must be at least 38 days old to order this vaccine

Hepatitis B HiB combined vaccine IM

GET WELL LOOP

Get Well Loop is a digital care management platform intended to improve the experience of patients by helping them stay involved with their care. Clinicians at Northwestern Medicine who have an active Get Well Loop account can now launch the application directly from Hyperspace and receive messages in their Epic In Basket. View more information [here](#), or visit the [Patient Outreach and Technology page on NMI](#).

NEW MRI BREAST ORDER QUESTIONS

New MRI Breast order questions will help clinicians order the correct breast imaging exam in the correct location. When placing an order for MRI Breast Screening, “NMH ONLY” has been added to the Preference List to indicate that an order for an MRI Breast Screening exam is available at Northwestern Memorial Hospital only. An order for an MRI Breast Diagnostic exam can be placed at all NM hospitals (except Palos Hospital). View [more information](#).

ADVANCE DIRECTIVE INFORMATION COLLECTION EFFORT

To encourage the collection of advance directive information, certain patients who have an upcoming appointment and active MyNM accounts will receive a message when no Power of Attorney is listed. A reminder will also appear on the After Visit Summary (AVS). This message will be sent to patients of NM Internal Medicine, Family Medicine and Geriatric practices who are:

- Established or return patients who are 65 or older
- Medicare patients who are 18 or older
- Medicare Advantage patients who are 18 or older

View [more information](#).

UPDATES TO FIBROSCAN WORKFLOW

Separate documentation fields are now available when resulting a Fibroscan in the Enter/Edit Results activity. Use the SmartPhrase, “.fibroscanrslt” to bring the result into a note. Once the result is documented, the reading physician or advanced practice provider will receive an In Basket Results message. View the [complete workflow](#).

HOME INFUSION TREATMENT REFERRAL

The new outpatient Home Infusion Treatment Referral order, shown here, will streamline workflows.

The screenshot shows a search window titled 'Order Search'. The search bar contains 'HOME INFUSION TREATMENT REFERRAL'. Below the search bar, there are tabs for 'Browse', 'Preference List', and 'Facility List'. A table titled 'Outpatient Procedures' is displayed with the following data:

Px Code	Name	Type	Pref List
REF659	HOME INFUSION TREATMENT REFERRAL	Outpat Ref	NM AMB OP REFERRAL PREE...

RX REORDERING AND CANCELLATION WORKFLOW

A prescription reordering workflow was recently identified as unintentionally canceling patients' prescriptions, preventing the order from being filled at their local pharmacy.

When ordering both short-term (local pharmacy) and long-term (mail order) prescriptions, some ordering clinicians will reorder the short-term medication and update the pharmacy. This sends a cancellation message to the pharmacy resulting in the prescription not being filled.

To avoid this issue, place a separate identical order and include an end date for the local pharmacy prescription instead of placing a Reorder. You can enter both orders at the same time using the Select Pharmacy function shown below. View [more information](#).

The screenshot shows a 'Select Pharmacies' dialog box with two pharmacies and two medication orders. The pharmacies are 'CVS 16349 IN TARGET - E...' and 'IngenioRx Home Delivery...'. The medication orders are 'lisinopril 2.5 mg tablet' with dosages '2.5 mg, Oral, DAILY' and 'Disp-30 tablet, R-0, Starting 4/13/2022' and 'Disp-90 tablet, R-4, Starting 5/14/2022'. The first pharmacy has a checked checkbox for the first medication and an unchecked checkbox for the second medication. The second pharmacy has an unchecked checkbox for the first medication and a checked checkbox for the second medication.

Pharmacy	Medication 1	Medication 2
CVS 16349 IN TARGET - E...	<input checked="" type="checkbox"/>	<input type="checkbox"/>
IngenioRx Home Delivery...	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Inpatient updates

ORDER SET UPDATES

Order sets receive regular updates based on new clinical research or to align care across NM.

- View [Order Set Updates](#) for new and updated Order Sets this month.
- View the latest [Order Set Inventory](#).
- For information related to customizing order sets, view [the Personalization Quick Start Guide](#) on the [Epic Enterprise Training site](#).

MANAGE NEW LABS TAB IN MANAGE ORDERS ACTIVITY

The new tab will allow clinicians to easily view and act on lab orders.

Manage Labs enables clinicians to view a series of ordered labs and discontinue a single lab within the series instead of having to discontinue the entire series.

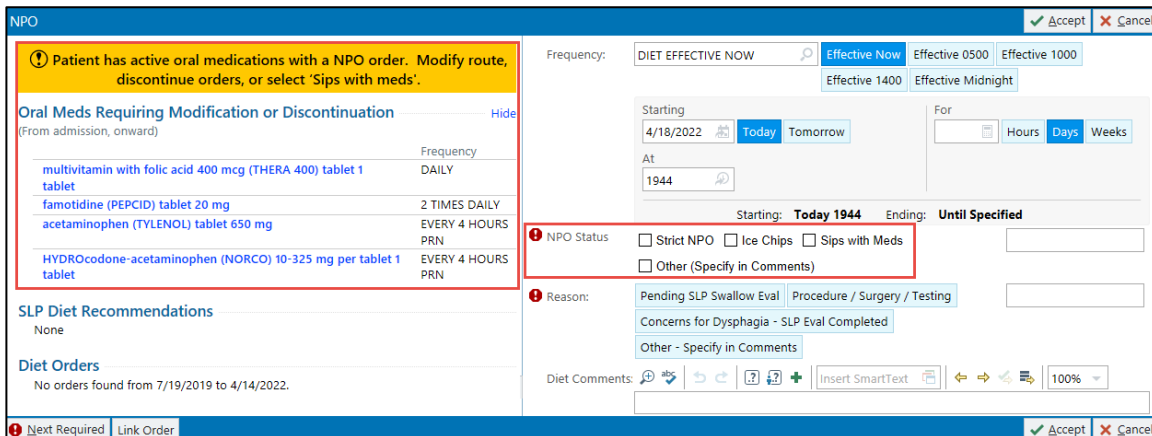

ENHANCEMENTS TO NPO AND TUBE FEEDING ORDER

A new oral medication banner will remind clinicians to consider an alternate route of administration when a patient has an NPO order.

When a clinician opens the order composer for the NPO or tube feeding order, and the patient has active oral medication orders, the banner will appear in the sidebar report with instructions. The sidebar will display Oral Medications that may need to be reconciled to an alternate route. Clinicians can modify multiple medications at the same time.

The NPO Status and Reason order questions are required, as shown here:

Medication orders cannot be modified or discontinued from the sidebar. Ordering clinicians must use the Manage Orders activity to modify or discontinue those orders when necessary.

STOP THE SEPSIS TIMER

An update to the Sepsis Treatment in Progress Storyboard flag will allow clinicians to stop the Sepsis Timer if they started it in error. The Sepsis Timer triggers when any the following occurs:

- Selecting Sepsis Suspected in the Predictive Model Best Practice Advisory (BPA)
- Using ED Sepsis or Infection Treatment order sets
- Adding sepsis to the Problem List
- Ordering an antibiotic with sepsis as the indication

When the timer is started, the Sepsis Treatment in Progress flag displays in Storyboard.

Choose the Sepsis Treatment in Progress flag to display the Sepsis Alert. To stop the sepsis timer, choose the new STOP Sepsis Timer button and an Acknowledge Reason at the bottom of the alert.

Note: The Sepsis Treatment in Progress Alerts will be triggered again if the patient meets applicable sepsis criteria. Review the [Sepsis Predictive Model tip sheet](#) for more information.

CELLULITIS CARE RELIABILITY PROJECT

Following a pilot at Central DuPage Hospital, a new Cellulitis: Update Photo BPA will be deployed across NM that will do the following:

- Remind clinicians to upload photos of cellulitis at least once every 48 hours during the patient's stay.
- Remain on Storyboard until a clinical image is uploaded to the chart and every 48 hours thereafter.

Use the Health Insurance Portability and Accountability Act (HIPAA)-compliant apps Haiku or Canto to photograph and immediately attach images to the patient's chart or encounter.

View these tip sheets for more information:

- [Device Configuration Haiku](#)
- [Clinical Image Capture](#)

WALGREENS BEDSIDE DELIVERY SMARTPHRASE (NORTHWESTERN MEMORIAL HOSPITAL AND LAKE FOREST HOSPITAL ONLY)

Clinicians with patients who participate in the Walgreens bedside delivery program will be able to use the SmartPhrase WALGREENSBEDSIDEDELIVERY in the Note to Pharmacy field. This will quickly pull in required information from the patient's chart.

Walgreens pharmacy uses this information to identify a patient's bed location and contact information to fill and deliver prescription orders to the patient before they are discharged. The SmartPhrase includes the following information:

Walgreens Bedside Delivery for:

- Patient's location: @Unit Description@ (full name of unit)
- Patient's room and bed: @Room/Bed@
- Patient's phone number: @MBPH@ (this pulls in the patient's mobile phone #)
- Expected discharge date and time: @expected discharge date/time from ADT/EPT side@

ACCUCHECK ORDER BPA FOR CRITICALLY ILL PATIENTS EXPANDS TO LFH

A new BPA will suggest a venous or arterial sample (per CMS guidelines) when point of care glucose testing is ordered for patients in the ICU who meet at least one the following criteria in their lab results:

- Hematocrit is less than 10% or more than 65%.
- Triglycerides are above 1800 mg/dL.
- Ascorbic acid (vitamin C) is greater than 3 mg/dL.

Capillary whole blood, when used to assess glucose level in some critically ill patients or in some patients with circulatory compromise, may yield a misleading result. As necessary, consider sending venous or arterial blood to the laboratory for glucose analysis.

Remove the following orders? POCT glucose
ONE TIME, today at 1447, For 1 occurrence, Routine

Apply the following? Glucose Testing

OBSTETRIC RESULT CONSOLE UPDATES

You will see the following updates to the Obstetric Result Console:

- Gonorrhea and Chlamydia results will display as separate results rather than reports.
- Chromosome Analysis Amniotic Fluid (CHARF) has been added.
- Tay Sachs, Sickle Cell and CVS have been removed.

- HIV results for Kishwaukee Hospital and Valley West Hospital will no longer be separated and will appear on one line.

DRUG SCREEN, 17 PANEL, UMBILICAL CORD ORDER NOW AVAILABLE

The Drug Screen, 17 Panel, Umbilical Cord order [LAB15392] is now available for locations that perform newborn cord toxicology. For more information related to customizing Preference Lists, view the [Order Preference List and Personalization tip sheet](#).
